

Resolution-Studio Count-Down

Requirement

Please ensure that your PHP version is at least 7.2 otherwise the module will not work. The minimum compatibility for module is PrestaShop 1.7.0.

Module overview

With the help of the Resolution-Studio Count-Down module, you can display a count down with a message under the header. You can create two successive countdowns. After the first is expired, the second will automatically start if the dates are configured. Otherwise it will disappear.

Also, you can create a unique count down for every language for your store page.

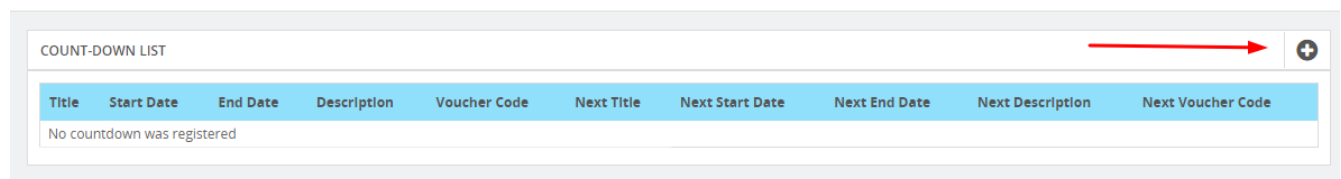

The module can be installed from the website back office, just like all the other modules.

Module configuration

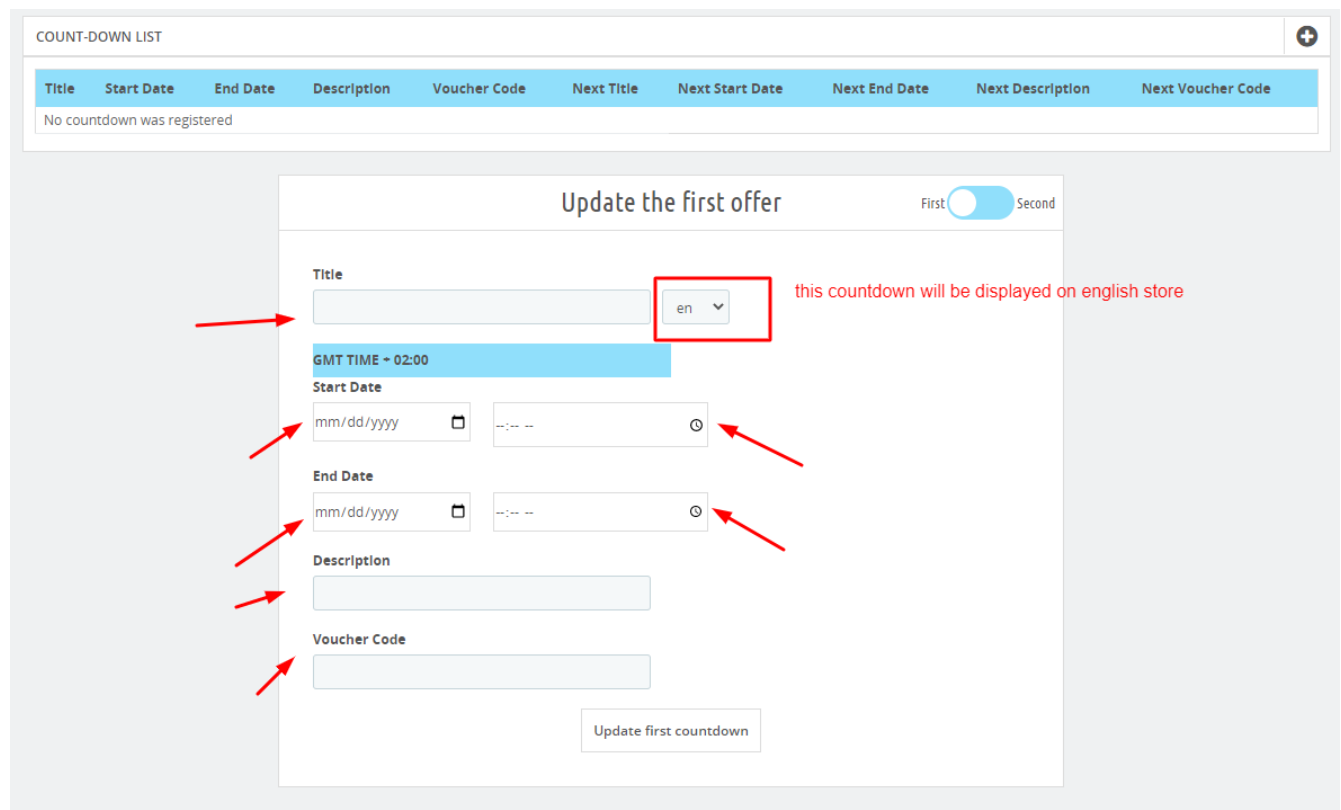

After installation, the module can be accessed by clicking on the Configure button.

After you accessed the module, follow the steps below to configure the countdowns.

1. With the plus button you can add a new countdown

2. After the pop-up is displayed, you need to add a title, a start date, end date with hours, description and a voucher code (All of these details are required). Also, you need to select a language. If your store is multilingual the countdown will be displayed only for the configured languages.

3. The last step is to **UPDATE** the modifications.

4. You can create a second countdown, which will be displayed, after the first is expired. (The second date needs to be after the first one)

COUNT-DOWN LIST

Title	Start Date	End Date	Description	Voucher Code	Next Title	Next Start Date	Next End Date	Next Description	Next Voucher Code
No countdown was registered

Update second Countdown

5. The next step is to **UPDATE** the second countdown modifications.

How does it work?

If you've created a countdown for a certain language, you can't delete it, only edit it (overwrite).
You can't create a second countdown, if the first one is not created.

After the configuration, the count down is displayed under the header:
